HIV & AIDS at a glance in Uganda

- 2022: Uganda is one of the countries with the highest HIV prevalence in the world.
- 2023: The country is working towards eliminating new HIV infections and achieving universal access to treatment by 2030.

Project Overview

- The Uganda National HIV/AIDS Strategic Plan (UNHAP) 2020-2023 outlines the country’s strategy to reduce the prevalence of HIV and AIDS.
- The plan aims to improve access to antiretroviral therapy (ART) and other treatment and care services.

Methodology

- The project will use a combination of qualitative and quantitative research methods to assess the impact of the intervention.
- Data will be collected through household surveys, focus group discussions, and key informant interviews.

The Scoring Process

- A comprehensive scoring rubric will be used to evaluate the project’s impact on reducing HIV and AIDS.
- The scoring criteria will include indicators such as access to treatment, coverage of ART, and reduction in new infections.

Analysis of Community fluorescent findings

- Increased awareness and knowledge about HIV and AIDS.
- Improved access to treatment and care services.
- Decreased stigma and discrimination.

Treatment & Care

- Increased availability of antiretroviral therapy (ART) and other treatment and care services.
- Improved treatment coverage and adherence.

Challenges

- Limited access to ART and other treatment and care services in rural and remote areas.
- High default rates and poor adherence to treatment.
- Limited access to condoms and other sexual and reproductive health services.

Conclusion

- The project is making significant progress in reducing the prevalence of HIV and AIDS in Uganda.
- Continued efforts are needed to ensure sustainable impact and reach more people in need of treatment and care services.

Acknowledgment

- The project is supported by the United States Agency for International Development (USAID).
- The partners include the National AIDS Control Program (NACP) and the Uganda National Council of AIDS (UNCA).

Prevention and Management of Co-Infections and Co-Morbidities

- The project will focus on providing comprehensive care and support to individuals co-infected with HIV and other co-morbidities.
- The aim is to improve overall health outcomes and quality of life for these individuals.

Other Health Systems

- The project will also support the strengthening of other health systems in Uganda.
- This includes improving access to maternal and child health services, tuberculosis control, and non-communicable disease management.

Outcome Map

- The project’s main outcomes include reduced HIV and AIDS prevalence, improved access to treatment and care services, and enhanced health systems capacity.
